

## **The Aquarium Experience**

### **High School Level**

The high school lesson design includes both in-class and independent assignments. Assignments relate to three major areas of the aquarium: Water, Rivers of the World and Coral Reefs. Each area includes an in-class lesson that can be completed prior to the visit to the aquarium. An additional independent project, Arizona Wetlands Project, is included as an optional opportunity for students to explore Arizona.

The independent assignment is designed to be taken to the aquarium and completed during the visit. Information to complete the assignment is located in and around the aquarium exhibits related to water, rivers of the world and coral reefs.

#### **Lessons for the classroom:**

- The Water Cycle
- The Importance of Rivers
- Coral Reef Explorer

#### **Independent Assignment to take to the aquarium:**

- Water World

#### **Optional Independent Project:**

- Arizona Wetlands Project
